Introducing Roccheggiani DP25 Twinwall

Manufactured by Roccheggiani in Italy, the DP25 double wall series is the leading product in Roccheggiani's range of flue systems. It can be used for a wide variety of purposes whether installing a traditional stove or a modern high efficiency condensing* appliance the DP25 product offers the ideal solution. DP25 is a double wall system that can be installed both inside and outside thanks to an efficient thermal insulation system made of high-density rock wool, which guarantees the optimal performance in all weather conditions.

The flue sections and associated components are easy to install, have a comprehensive weatherproof seal when locked into place, when installed with the provided locking band. This combined system allows for the best thermal performance, an efficient installation and all together with an uncompromised finish. The range has been tested in accordance with EN 1856-1 and the thermal class is tested to T600, allowing for the highest combustion temperature performance. The system is available for all domestic standard installations, in both stainless steel and powder coated black. The system is also available for larger commercial applications and in several colour choices.
