Designed to fit clay liner externally

THE MIDCAT

The most innovative approach to solving the problems of pollution created by woodburning stoves

Using specially developed catalysis-emissions-technology (CET), the MidCat guarantees to:

- Reduce carbon monoxide output by more than 75%
- Reduce organic gaseous compounds by 35%
- Reduce the solids and liquids which create particulate matter by 25%
- Increase heat output from the flue gas
- Improve the performance of many older stoves and make them compliant with the new Ecodesign Regulations
- Enhance newer models and future-proof them against further tightening of environmental regulations

The MidCat is conveniently designed to be retrofitted to an existing stove (ideally during a sweep) or will equally improve a new stove.

SINGLE WALL FLUE PIPE

**TEN-VIT
VITREOUS
ENAMEL**

This enamelled steel is formed with strength and durability to resist scratches, abrasion, impact and wear. It has excellent thermal stability of more than 500 degrees.

STAINLESS STEEL SINGLE WALL FLUE PIPE

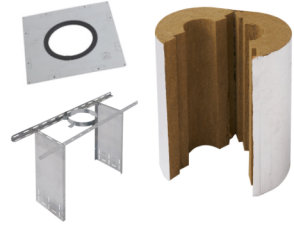

A wide range of Single Wall Stainless Steel components.
